

**Lego-type attachment**

## Relay Box Test Extension Kit

Eliminate wire piercing!

### Overview

The Relay Box Test Extension Kit provides a fast, reliable way to pinpoint test relay circuits located in the underhood Relay/Fuse Junction Box. Testing is done without wire piercing, removing the junction box for back-probing or trying to find the proper wires in the harness bundle that exits the box.

Extends the relay away from the junction box. Provides the ability to test the circuit live with the relay in place. It acts like a mini breakout box for pinpoint testing relay circuits.

### Kit Contents

- 2 @ Large relay spade terminal 13-inch extensions
- 6 @ Medium relay spade terminal 13-inch extensions
- 5 @ Small relay spade terminal 13-inch extensions
- 1 @ Plastic Storage Case
