

Tru Align[®]

S.V.P., n'endommage pas mes roues

This shop is committed to providing its customers with the absolute best service possible, and that means having the best equipment available. In the past, alignment equipment had to attach directly to the outside lip of the wheel, potentially scratching through the finish and causing permanent and unsightly damage. Now with the Tru Align System, the metal clamps attach to precision plates that mount directly to the car's HUB giving a more accurate alignment without scratching your wheels!

Un temps additionnel est requis pour installer le "True Align System" ainsi des frais de service devraient être chargés.

Tru Align has received approval from Michelin, Goodyear, Tire Kingdom and others
